## Rubber seal 3 port direct operated solenoid valve

### Specifications

Fluid	Air
Ambient and fluid temperature (°C)	-10 to 50 (With no freezing. Refer to page 714.)
Response time (DC) ms <sup>Note 1)</sup>	ON: 5 or less, OFF: 4 or less
Max. operating frequency (Hz)	20
Manual override	Non-locking push type, push-turn locking slotted type
Lubrication	Not required
Mounting position	Unrestricted
Impact / vibration resistance (m/s <sup>2</sup> ) <sup>Note 2)</sup>	150/30
Enclosure	Dust tight

Note 1) Based on dynamic performance test, JIS B 8374-1981 (Standard type :Coil temperature 20°C, at rated voltage, without surge voltage suppressor)

Note 2) Impact resistance: No malfunction occurred when it is tested with a drop tester in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Initial value)

Vibration resistance: No malfunction occurred in one sweep between 45 and 2000Hz. Test was performed in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states. (Initial value)

### Symbol

10-V114 (A)

10-V124 (A)

\* In common between 110VAC and 115VAC, and between 220VAC and 230VAC.

\* For 115VAC and 230VAC, the allowable voltage fluctuation will be -15% to 5% of rated voltage.

\* The voltage drop will occur due to the internal circuit of S, Z and T types (with energy saving circuits).

Allowable voltage fluctuations should be within the range below.

S and Z types 24 VDC: -7% to +10%

12 VDC: -4% to +10%

T type 24 VDC: -8% to +10%

12 VDC: -6% to +10%

\* Select the DC standard type or the power saving circuit type when the valve is continuously energized for long periods of time.

Note) Refer to page 647 for details.

## Specific Product Precautions 1

Be sure to read before handling.

### Warning

#### Manual override operation

Since connected equipment will be actuated when the manual override is operated, first confirm that conditions are safe.

#### Non-locking push type [Standard]

Press in the direction of the arrow.

#### Locking slotted type [B]

Turn in the direction of the arrow.

### Caution

When operating with a screwdriver, turn it gently using a watchmaker's screwdriver.

[Torque: Less than 0.1 N·m]

### Caution

#### How to use plug connector

##### 1. Attaching and detaching connectors

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

##### 2. Crimping of lead wires and sockets

Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area.

Use special tool when crimping. (For the crimping tool, please consult with SMC.)

### Caution

#### How to use plug connector

##### 3. Attaching and detaching sockets with lead wires

###### • Attaching

Insert the sockets into the square holes of the connector (with  $\oplus$  and  $\ominus$  indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then confirm that they are locked by pulling lightly on the lead wires.

###### • Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

#### Plug connector lead wire length

Standard length is 300 mm, however, the following lengths are also available.

#### How to Order Connector Assembly

For DC : **SY100-30-4A** 

For 100 VAC : **SY100-30-1A** 

For 200 VAC : **SY100-30-2A** 

For other voltages of AC : **SY100-30-3A** 

Without lead wire : **SY100-30-A**

(with connector and 2 pcs. of sockets only)

##### How to Order

Indicate part numbers of the valve without connector and the required connector assembly separately.

<Example> Lead wire length 2000 mm

For DC  
10-V114-5LO  
SY100-30-4A-20

For AC

## Specific Product Precautions 2

Be sure to read before handling.

### Surge voltage suppressor

(For DC)

Grommet, L/M plug connector

#### Standard type (with polarity)

With surge voltage suppressor (□S)

With light/surge voltage suppressor (□Z)

#### Non-polar type

With surge voltage suppressor (□R)

With light/surge voltage suppressor (□U)

- Please connect correctly the lead wires to + (positive) and - (negative) indications on the connector.
- For DC voltages other than 12 and 24 VDC, use caution not to connect in reverse due to the absence of a diode to prevent reverse current. (Wrong polarity will cause trouble.)
- Solenoids, whose lead wires have been pre-wired: positive side red and negative side black.

#### With power saving circuit

Power consumption is reduced by approximately 75% compared with the standard product by eliminating the need for electrical current for holding. (Effective after more than 62ms energized and 24 VDC rated voltage applied.)

#### Working principle

The electrical circuit as shown above, allows reduced holding current consumption and measures power saving. Refer to electric waveform on the right.

- When a power saving circuit is installed, a diode to prevent reverse current is not provided. Therefore, use caution not to connect in reverse.

<For AC>

Grommet, L / M plug connectors

#### With indicator light (□Z)

### Caution

In the case of ZNR surge voltage suppressor, take note the surge voltage to be suppressed at controller side as there will be a residual voltage according to the protective element and rated voltage. Moreover, the residual voltage of the diode is approximately 1V.

### Connector assembly with cover

Connector assembly with protective cover enhances dust protection

- Effective in preventing possible short circuit problems due to contaminants in contact with connector section
- Chloroprene rubber for electrical use, which provides outstanding weather resistance and electrical insulation, is used for the cover material. However, be careful not to allow contact with cutting oil, etc.
- Round cord provides neat appearance.
