

3-Color Display Digital Gap Checker

F type **0.01 to 0.03 mm**
Rated distance range (Displayable/Settable range: 0 to 60)

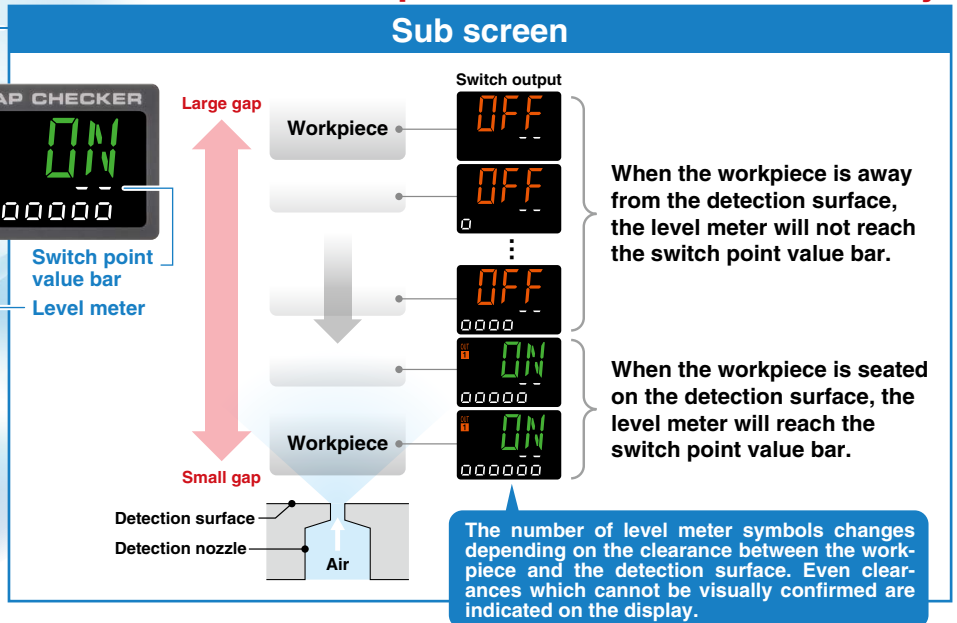

G type **0.02 to 0.15 mm**
Rated distance range (Displayable/Settable range: 10 to 300)

H type **0.05 to 0.30 mm**
Rated distance range (Displayable/Settable range: 30 to 500)

Confirm at a glance if a workpiece is placed or not!

The clearance distance between the detection surface and the workpiece can be found intuitively!

Simple Setting

Change the settings while checking the displayed value!

3 steps

Snap shot function

Pressing the UP and DOWN buttons simultaneously for a minimum of 1 second will make the switch point the same as the current displayed value!

...Page 1

Energy Saving ...Page 2

• Air consumption: **60% reduction** * For the G type

Environmental Resistance ...Page 1

- Improved drainage resistance: **increased by 10 times or more**
* Compared with the ISA2 based on SMC's specific testing conditions (Oil proof test)
- Easier maintenance

ISA3 Series

Manifold ...Page 5

Centralized lead wire (With control unit)

CAT.ES100-105D

3-Step Setting (Switch Point Change Mode)

Simple setting of the switch point value (point at which the clearance reaches the switch point value)

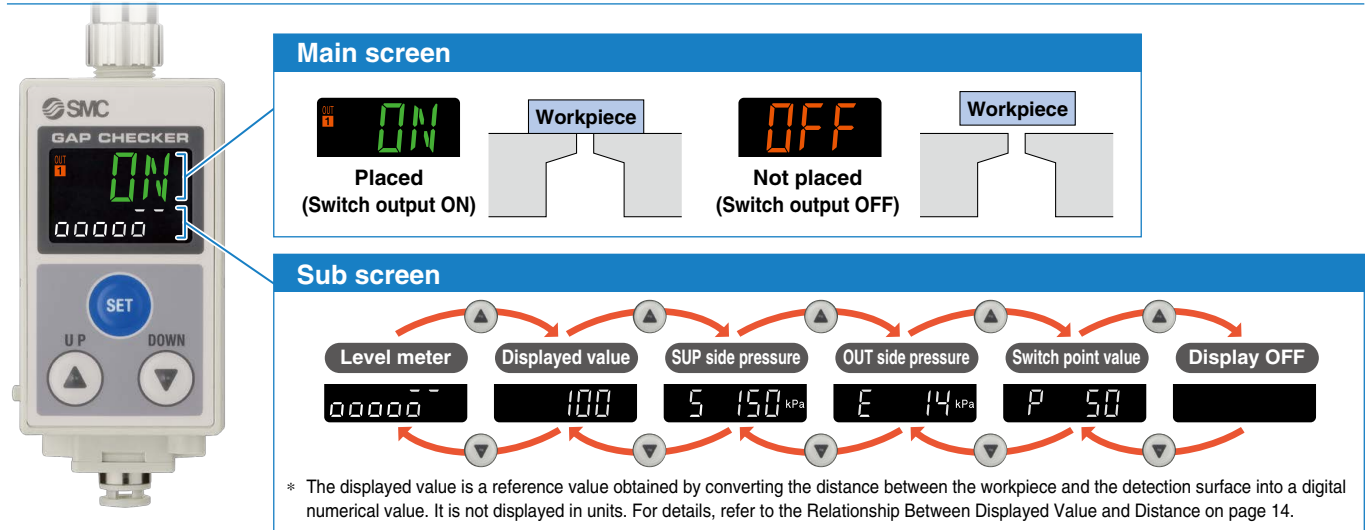

Snap shot function

Pressing the ▲ and ▼ buttons simultaneously for a minimum of 1 second then releasing the buttons when the displayed switch point value disappears will make the switch point the same as the current displayed value.

Features of the 2-Screen, 3-Color Digital Display

The seating condition can be checked at a glance. The sub screen can display 1 of 6 display options.

Improved Environmental Resistance

Easier maintenance

The internal orifice part can be removed for cleaning. It is not necessary to remove the piping or metal connection fitting for cleaning even when the product is installed in the user's equipment.

* Once the orifice has been removed, the switch point will need to be set again.

Measures against drainage

Drainage resistance: increased by **10 times** or more

* Based on SMC's specific testing conditions (Oil proof test)
* Compared with the ISA2

Withstand pressure increased by **3 times***1 compared with the ISA2

Max.: 600 kPa

*1 Compared with the ISA2 with a 0.2 MPa pressure gauge

High-pressure flushing

* The switch output will be OFF during flushing.

Noise reduction

Energy saving

Measures against clogging

A Exhaust noise: **Noise reduction**
Zero

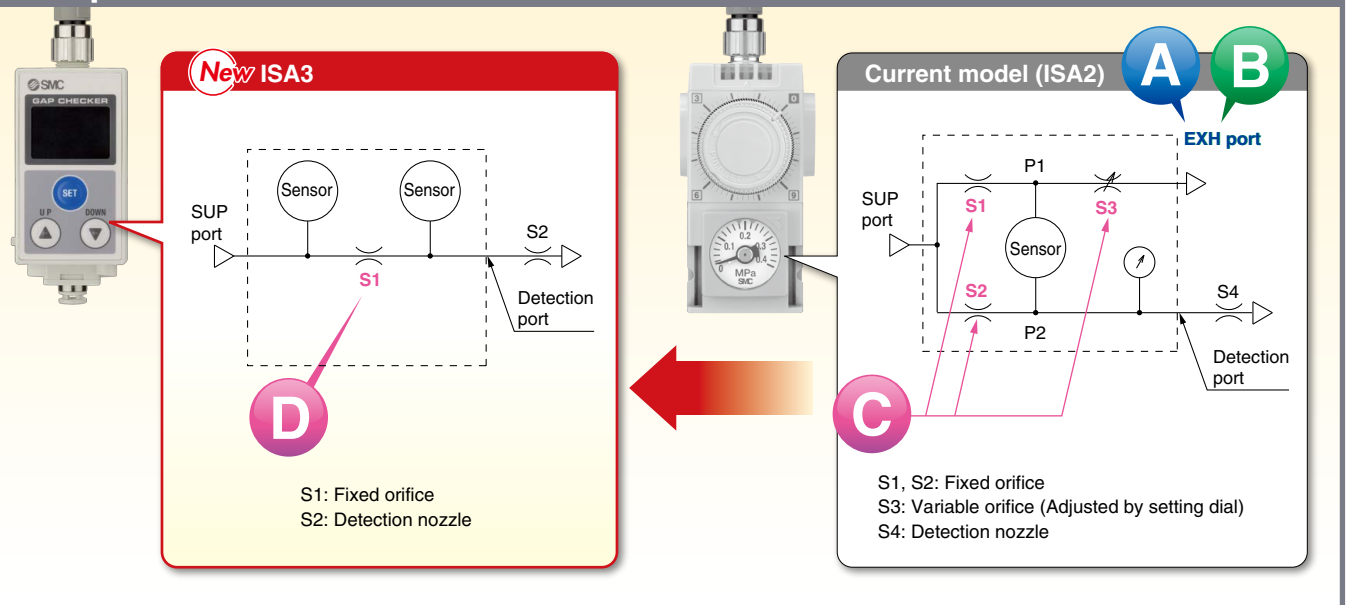

The current model (ISA2) needs to exhaust air from the exhaust port due to its bridge circuit. However, the ISA3 does not exhaust air from the product body. This reduces noise considerably compared with the current model.

B Air consumption: **Energy saving**
60% reduction*1

The new detection principle eliminates the need for air to be exhausted from the product. This makes the flow consumption 0 L/min when a workpiece is seated. The result is a great reduction in air consumption compared with the current model.

*1 Conditions: Unseated for 5 seconds and seated for 20 seconds (For the G type)

Comparison of detection circuit

C Number of orifices: **Measures against clogging**
3 → 1

By reducing the number of internal orifices from 3 to 1, there is less possibility of fluctuations in the output due to clogging. By removing the setting dial for S3, fluctuations in the detection distance can be prevented.

D Orifice area ratio: **Measures against clogging**
68% increase*1

A larger orifice area lowers the possibility of clogging. However, even if the orifice does become clogged with foreign matter, the product construction allows for the internal orifice to be removed for cleaning.

*1 Excludes the F type

2 Outputs Type

1. Outlet pressure, 2. Gap size, or 3. Supply pressure can be selected for OUT2.

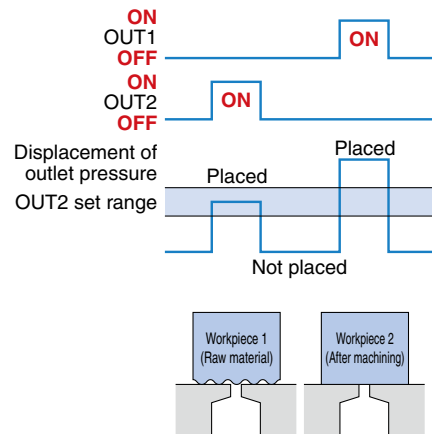

1. Monitoring of the Outlet Pressure

OUT2 detection of rising pressure when a workpiece is not placed that signifies detection nozzle clogging.

Can discern between 2 different types of workpiece
Can detect raw material workpieces and defective workpieces via the **pressure** (OUT2)

2. Monitoring of the Gap Size

Can discern between 2 different types of workpiece
Can detect the difference between raw material workpieces and defective workpieces via the **gap size**

3. Monitoring of the Supply Pressure

Detection of rated pressure range via OUT2

Compact & Lightweight

Volume: **40% reduction**

Weight: **55% reduction**

(Comparison between the ISA3-GC and the current model ISA2 with One-touch fitting)

Space Saving & Reduced Wiring Labor (Centralized Lead Wire)

Installation space:
30 mm reduction

Requires less wiring labor

Current model

A separate cable is required between the terminal block box and the junction terminal block.

Cable processing and crimping work including Y-terminals and round terminals are required for the number of stations of the gap checker.

ISA3

Wiring can be performed without tools with the M12 connector.

Centralized lead wire

A 5 m lead wire supports wiring to the junction terminal block.

Junction terminal block

Keylock Function

A key LED turns ON when the product is locked and button operation is disabled to prevent unintentional changes to set values.

Piping Variations

Piping specification:
C type

Piping specification:
F type

Mounting

Bracket

DIN rail

Manifold

With control unit

* Bracket mounting only

Without control unit

Centralized lead wire

Supply port: Left side

Supply port: Right side

* The electrical entry of the centralized lead wire for the M12 connector is on the right side.
When using a right-sided supply port, arrange the centralized lead wire so that it does not interfere with the control unit.

Application Examples

Confirmation of the reference plane for the press fitting of shafts

Confirmation of close contact with the reference plane for machining

Confirmation of close contact with the workpiece for machining

Main Functions

Display OFF mode

Display OFF mode can be selected. The display can be turned OFF to reduce power consumption.

Security code

When the security code is activated, the code needs to be entered before the product can be operated.

Security code:
Input an arbitrary 3-digit code.

Display color

The color of the main display can be set to change depending upon the output activity. The display color change makes visual identification of the output ON/OFF easier.

When ON: Green	When OFF: Orange
When ON: Orange	When OFF: Green
Normally: Orange	
Normally: Green	

Displayed value compensation

The displayed value can be corrected within $\pm 20\%$ R.D. of the displayed value at the time of shipment.

Forced output

The output can be fixed to an ON/OFF state when starting the system or during maintenance. This enables the confirmation of the wiring and prevents system errors due to unexpected output.

Unit conversion

The pressure unit displayed on the sub screen can be changed.

Display unit	kPa	bar	psi
Minimum setting resolution	1	0.01	0.1

Zero-clear of pressure value

The pressure value displayed on the sub screen can be cleared to zero.

Weight		113 g (Cable not included, One-touch fitting)		
Standards		CE marking (EMC directive/RoHS directive)		

- *1 For details, refer to the Relationship Between Displayed Value and Distance on page 14.
 *2 If hysteresis is set to 3 (Default setting), the "Displayable/Settable range" of the F type is limited to 57. If hysteresis is set to 20 (Default setting), the G type is limited to 280 and the H type is limited to 480.
 *3 The pressure value will be the indicated on the sub screen.
 *4 For details on the detection nozzle, refer to the figures on page 14.

- *5 Refers to when OUT2 is set to detect the distance
 *6 Refers to when OUT2 is set to detect the pressure
 *7 If the applied pressure fluctuates around the set value, the hysteresis must be set to a value more than the fluctuating width, otherwise chattering will occur.
 *8 Only applies to the digital gap checker body excluding the control unit.

Rated Distance Range and Displayable/Settable Range

⚠ Caution

The displayed value is a reference value obtained by converting the distance between the workpiece and the detection surface into a digital numerical value. It is not displayed in units.

For details, refer to the Relationship Between Displayed Value and Distance on page 14.

Rated distance range: Distance range within which the product meets the specifications

Displayable/Settable range: Range within which it is possible to display or set values, (Not guaranteed to meet the specifications)

Model	Distance				
	0 mm	0.02 mm	0.05 mm	0.15 mm	0.30 mm
ISA3-F type	Rated distance range		Displayable/Settable range		
ISA3-G type	Rated distance range		Displayable/Settable range		
ISA3-H type	Rated distance range		Displayable/Settable range		

■ Rated distance range ■ Displayable/Settable range

Supply Pressure Dependence Characteristics

The distance for the product to turn ON varies depending on the supply pressure.

The graphs below show the variation of the distance for the product to turn ON, for 3 types of gap, by changing the supply pressure (± 50 kPa) when the product is set to turn ON at 150 kPa supply pressure.

Test conditions	Detection nozzle: $\phi 1.5$ Piping: F type $\phi 4 \times \phi 2.5$ tube/G, H type $\phi 6 \times \phi 4$ tube Reference pressure: 150 kPa
------------------------	---

* Use within the rated pressure range (100 kPa to 200 kPa).

It will be impossible to measure the gap when the operating pressure is less than 80 kPa or over 220 kPa. And the output will be OFF.
(Refer to the Relationship Between Supply Pressure and Display on page 22.)

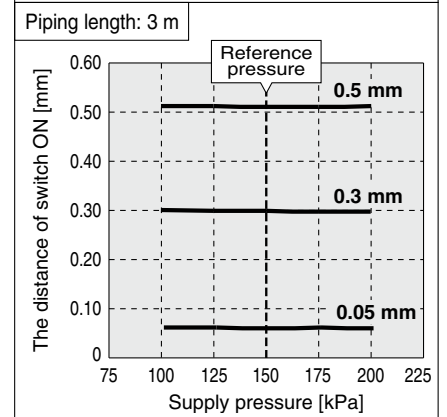

ISA3-F

ISA3-G

ISA3-H

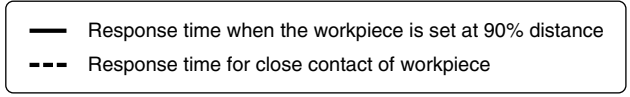

Response Time

Response time is the elapsed time between the pressure supply and the turning ON of the switch output.

The response time varies depending on the piping length from the OUT port to the detection nozzle, and the seating condition of the workpiece. The graphs below show the response time when the workpiece is approached at 90% distance and 0% distance (close contact). (* The switch point is 100% distance.)

(Example: When the switch point is set to 0.1 mm, the response time when the workpiece is at 0.09 mm and 0 mm are measured.)

Test conditions	Detection nozzle: $\varnothing 1.5$ Piping: F type $\varnothing 4 \times \varnothing 2.5$ tube/G, H type $\varnothing 6 \times \varnothing 4$ tube Supply pressure: 200 kPa
------------------------	---

ISA3-F

ISA3-G

ISA3-H

Relationship Between Displayed Value and Distance

The graphs below show the relationship between the displayed value and distance.

* The data shown below are for reference. They change depending on the individual product differences, machining dimensions of the nozzle, etc.

Test conditions	Detection nozzle: $\phi 1.5$
	Detection nozzle piping:
	F type $\phi 4 \times \phi 2.5$ tube 1 m, 3 m, 5 m/ G, H type $\phi 6 \times \phi 4$ tube 1 m, 3 m, 5 m
	Supply pressure: 200 kPa

ISA3-F

ISA3-G

* Values of 9 and under are displayed as "0."

ISA3-H

* Values of 29 and under are displayed as "0."

Detection Nozzle Shape

The nozzle shape must be similar to Fig. 1.

Do not chamfer the nozzle as shown in Fig. 2, as the characteristics will be affected.

Fig. 1: Recommended nozzle shape

Fig. 2: Unsuitable nozzle shape

If there is a possibility that the atmospheric vent port of the gap checker will be exposed to water or dust, insert a tube into the atmospheric vent port and route the other end of the tube to a safe place away from water or dust.

* For tubing, please use the SMC TU0425 (polyurethane, O.D. ø4, I.D. ø2.5) for the gap checker.

⚠ Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

ISA-19-□ (Centralized lead wire: 1 output type)

M12 connector no.	Pin no.	Description	Lead wire color
1	1	DC(+)	Brown*1
	2	N.C.	—
	3	DC(-)	Blue*1
	4	OUT1	Black
2	1	DC(+)	Brown*1
	2	N.C.	—
	3	DC(-)	Blue*1
	4	OUT1	White
3	1	DC(+)	Brown*1
	2	N.C.	—
	3	DC(-)	Blue*1
	4	OUT1	Gray

M12 connector no.	Pin no.	Description	Lead wire color
4	1	DC(+)	Brown*1
	2	N.C.	—
	3	DC(-)	Blue*1
	4	OUT1	Orange
5	1	DC(+)	Brown*1
	2	N.C.	—
	3	DC(-)	Blue*1
	4	OUT1	Red
6	1	DC(+)	Brown*1
	2	N.C.	—
	3	DC(-)	Blue*1
	4	OUT1	Green

ISA-21-□ (Centralized lead wire: 2 outputs type)

·ISA-21-2/3

M12 connector no.	Pin no.	Description	Lead wire color
1	1	DC(+)	Brown*1
	2	OUT2	Orange
	3	DC(-)	Blue*1
	4	OUT1	Black
2	1	DC(+)	Brown*1
	2	OUT2	Red
	3	DC(-)	Blue*1
	4	OUT1	White
3	1	DC(+)	Brown*1
	2	OUT2	Green
	3	DC(-)	Blue*1
	4	OUT1	Gray

·ISA-21-4/5/6

M12 connector no.	Pin no.	Description	Lead wire color
1	1	DC(+)	Brown*1
	2	OUT2	Yellow
	3	DC(-)	Blue*1
	4	OUT1	Black
2	1	DC(+)	Brown*1
	2	OUT2	Purple
	3	DC(-)	Blue*1
	4	OUT1	White
3	1	DC(+)	Brown*1
	2	OUT2	Gray/Black
	3	DC(-)	Blue*1
	4	OUT1	Gray

M12 connector no.	Pin no.	Description	Lead wire color
4	1	DC(+)	Brown*1
	2	OUT2	Orange/Black
	3	DC(-)	Blue*1
	4	OUT1	Orange
5	1	DC(+)	Brown*1
	2	OUT2	Red/Black
	3	DC(-)	Blue*1
	4	OUT1	Red
6	1	DC(+)	Brown*1
	2	OUT2	Green/Black
	3	DC(-)	Blue*1
	4	OUT1	Green

*1 Brown and blue are connected inside the product.

Dimensions

ISA-14 (Bracket when control unit not fitted)

Y200T-A (Spacer with bracket)

ISA-17 (Bracket when control unit fitted)

ISA-20 (Bracket for centralized lead wire)

Error Indication

Main screen	Name	Description	Measures
- - -	Supply pressure error	Displayed when supply pressure is outside the range of 80 kPa to 220 kPa. Measurement is not possible.	Supply rated pressure (100 kPa to 200 kPa). The product will return to measurement mode automatically.
- - -	Outside of the displayable range (Switch point change mode)	The workpiece is outside the displayable range.	Move the workpiece closer to the detection nozzle.
Er 1	OUT1 over current error	The switch output (OUT1) load current has exceeded 80 mA.	Turn the power OFF and remove the cause of the over current. Then turn the power ON again.
Er 3	Zero clear error	Zero clear was not performed at atmospheric pressure. (Pressure outside of ± 14 kPa was supplied present.)	Perform zero clear at atmospheric pressure.
Er 0	System error	An internal data error has occurred.	Turn the power OFF and turn it ON again.
Er 4 to Er 9			
Sub screen	Name	Description	Measures
HHH	Supply pressure error (When [SUP side pressure value display] is set to the sub screen)	Pressure exceeding 220 kPa is supplied.	Keep the supply pressure within the displayable range of -20 kPa to 220 kPa.
LLL		Vacuum pressure (less than -20 kPa) is supplied.	

Relationship Between Supply Pressure and Display

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

 **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

 **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

 **Danger :** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
 ISO 4413: Hydraulic fluid power – General rules relating to systems.
 IEC 60204-1: Safety of machinery – Electrical equipment of machines.
 (Part 1: General requirements)
 ISO 10218-1: Manipulating industrial robots – Safety.
 etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
 If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
 If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
 Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
 This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
 Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision History

Edition B * The F type (Rated distance range: 0.01 to 0.03 mm) has been added. ST

Edition D * A 2 outputs type has been added.

Edition C * A centralized lead wire has been added.
 * The AR-B regulator (control unit) has been added.
 * The AC type 2-port solenoid valve (control unit) has been added.
 * Number of pages has been increased from 16 to 24. US

* The AR-A regulator (control unit) has been deleted.

WW

Safety Instructions

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
