Compact Guide Cylinder

MGP Series

Ø12, Ø16, Ø20, Ø25, Ø32, Ø40, Ø50, Ø63, Ø80, Ø100

Up to Weight reduced!

Weight reduced by up to 24% with a shorter guide rod and thinner plate

3 types of bearing can be selected.

| 0 1 11 | Harris P. L. L. and Town I | 05 1 1 (00 |

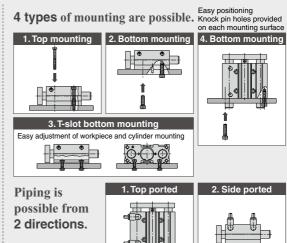

*: Compared with the slide bearing type, 25 stroke (ø32 to ø100) (No projection for ø12 to ø25-25 stroke)

- *: Compared with the slide bearing type, ø12 to ø25-20 stroke
- *: Compared with the slide bearing type, ø32 to ø100-25 stroke
- **Performance and strength (rigidity) are equivalent to the current MGP series.**
- **Mounting dimensions are equivalent to the current MGP series.**

MGP Series (Basic Type), Stroke Variations

| Bearing type | Bore size | Stroke [mm] | Made to Order |
|----------------|-----------|--|--|
| Bearing type | [mm] | 10 20 25 30 40 50 75 100 125 150 175 200 250 300 350 400 | wade to Order |
| | 12 | | -XA□: Change of guide rod end shape |
| MGPM | 16 | | -XB6: Heat resistant cylinder (-10 to 150°C) -XB10: Intermediate stroke (Using exclusive body) |
| Slide bearing | 20 | | -XB13: Low speed cylinder (5 to 50 mm/s) |
| | 25 | | -XC6: Made of stainless steel |
| MGPL | 32 | | -XC8: Adjustable stroke cylinder/ Adjustable extension type |
| Ball bushing | 40 | | -XC22: Fluororubber seal |
| MGPA | 50 | | -XC35: With coil scraper -XC79: Tapped hole, drilled hole and pinned hole |
| High precision | 63 | | machined additionally |
| ball bushing | 80 | | -XC82: Bottom mounting type -X144: Symmetrical port position |
| | 100 | | -X867: Side porting type (Plug location changed) |

With Air Cushion

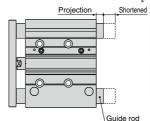

• Weight reduced by up to 24%

Bore size [mm] Reduction rate [%] Weight [kg] ø16 12 1.28 18 1.91 22 2.52 24 3.57 23 4.13 23 6.56 ø**63** 22 8.04

21 11.35 19 17 72 *: Compared with the current MGPM with air cushion,

200 stroke

• Guide rod shortened by up to 35.5 mm (MGPM100-50 stroke)

| Bore size | Guid | e rod |
|--------------|--------------|---------------|
| Bole Size | Shortened by | New dimension |
| ø32 | 33.5 | 9 |
| ø 40 | 33.5 | 2.5 |

- *1: Water resistant type auto switches are mountable on the above models, but in such case SMC cannot guarantee water resistance. A water resistant type cylinder is recommended for use in an environment which requires water resistance.
 - However, please contact SMC for water resistant products of ø12 and ø16.

3 m----- L

- *2: The D-P3DWA□ is mountable on bore size ø25 to ø100.
- *3: 1 m type lead wire is only applicable to the D-A93.
- *: Lead wire length symbols: 0.5 mNil (Example) M9NW *: Solid state auto switches marked with " O " are produced upon receipt of order. 1 m----- M (Example) M9NWM
- (Example) M9NWL (Example) M9NWZ 5 m..... Z *: Other than the auto switches listed above, the D-P4DW type can be mounted. Refer to page 489 for details.
- *: For details about auto switches with pre-wired connector, refer to pages 1192 and 1193.
- *: Auto switches are shipped together, (but not assembled).

2 Water Resistant Cylinder

Ideal for use in a machine tool environment exposed to coolants. Applicable for use in an environment with water splashing such as food processing and car wash equipment, etc.

How to Order

- *: Piston rod and guide rod are made of stainless steel.
- *: Please contact SMC when using liquids that contain sulfur.

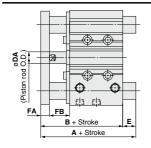

Made to Order

3Cylinder with Stable Lubrication Function (Lube-retainer)

Improves durability in environments with micro-powder. (Compared with the standard model) In addition, the overall length and mounting are the same as those of the standard model.

How to Order

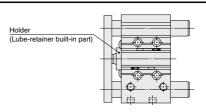

Cylinder with stable lubrication function (Lube-retainer)

Specifications

| Bore size [mm] | 20, 25, 32, 40, 50, 63, 80, 100 |
|----------------------------|---------------------------------|
| Action | Double acting |
| Minimum operating pressure | 0.15 MPa |
| Cushion | Rubber bumper on both ends |

^{*:} Specifications other than above are the same as standard, basic type.

For details, refer to the WEB catalog.

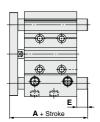

4 Guide Unit with Lube-retainer

How to Order

The dimensions in () are the same as standard type.

High Precision Ball Bushing/MGPA

∧ Caution

Positioning accuracy for pin hole on the plate

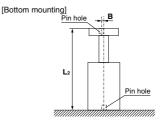

Dispersion of dimensions when machining each component will be accumulated in the plate pin hole positioning accuracy when mounting this cylinder. Values below are referred as a guide.

 $A = Catalog dimension \pm (0.1 + L1 \times 0.0008) [mm]$

*: To be 0.15 for ø80, ø100

Note) Displacement by load and self-weight deflection by plate and guide rod are not included.

 $\mathbf{B} = \pm (0.045 + \mathbf{L}_2 \times 0.0016) \text{ [mm]}$

MGPA50, 63

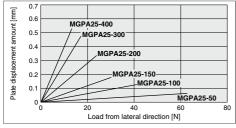

MGPA20

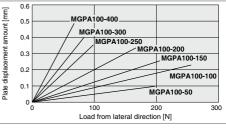

MGPA80

MGPA25

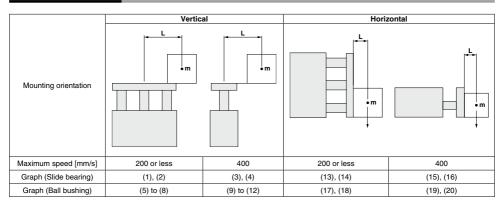

MGPA100

- *: The guide rod and self-weight for the plate are not included in the above displacement values.
- *: Allowable rotating torque, and operating range when used as a lifter, are the same as those of the MGPL series.

Basic Type MGP Series **Model Selection**

Selection Conditions

Selection Example 1 (Vertical Mounting)

Selection conditions

Mounting: Vertical

Bearing type: Ball bushing

Stroke: 30 stroke

Maximum speed: 200 mm/s

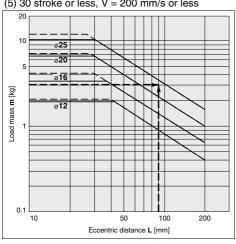

Load mass: 3 kg

Eccentric distance: 90 mm

Find the point of intersection for the load mass of 3 kg and the eccentric distance of 90 mm on graph (5), based on vertical mounting, ball bushing, 30 stroke, and the speed of 200 mm/s.

→ MGPL25-30Z is selected.

(5) 30 stroke or less, V = 200 mm/s or less

Selection Example 2 (Horizontal Mounting)

Selection conditions

Mounting: Horizontal

Bearing type: Slide bearing

Distance between plate and load center of gravity: 50 mm

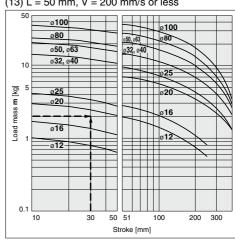

Maximum speed: 200 mm/s

Load mass: 2 kg Stroke: 30 stroke

Find the point of intersection for the load mass of 2 kg and 30 stroke on graph (13), based on horizontal mounting, slide bearing, the distance of 50 mm between the plate and load center of gravity, and the speed of 200 mm/s.

→ MGPM20-30Z is selected.

(13) L = 50 mm, V = 200 mm/s or less

· When the maximum speed exceeds 200 mm/s, the allowable load mass is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

| Max. speed | Up to 300 mm/s | Up to 400 mm/s | Up to 500 mm/s |
|-------------|----------------|----------------|----------------|
| Coefficient | 1.7 | 1 | 0.6 |

[·] Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

Operating Range when Used as Stopper

Bore Size: Ø12 to Ø25/MGPM12 to 25 (Slide Bearing)

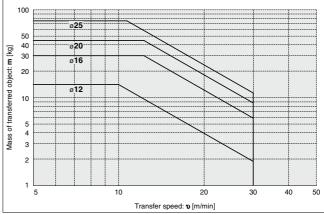

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

△ Caution

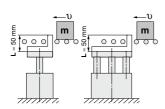

Caution on handling

- When using as a stopper, select a model with 30 stroke or less.
- The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

MGPM12 to 25 (Slide Bearing)

Bore Size: Ø32 to Ø100/MGPM32 to 100 (Slide Bearing)

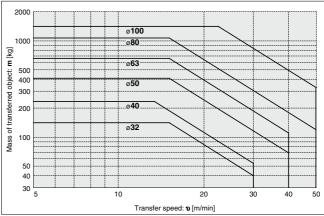

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

△ Caution

Caution on handling

- When using as a stopper, select a model with 50 stroke or less.
- The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

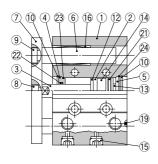

MGPM32 to 100 (Slide Bearing)

*: Refer to graphs (13) and (15) if line pressure is applied by a roller conveyor after the workpiece is stopped.

Bottom view

- *1: Refer to Section EE details for the shape of ø12 to ø25 with stroke of 50 or less.
- *: The use of a slot (width XA, length XB, depth 3) allows for a relaxed pin pitch tolerance, with the pin hole (ØXAH9, depth 6) as the reference, without affecting mounting accuracy.
- *: For intermediate strokes other than standard strokes, refer to Manufacture of Intermediate Strokes on page 433.
- *: For bore size ø12 and ø16, only M5 x 0.8 port is available.
- *: For bore size ø20 or more, choice of Rc, NPT, G port is available. (Refer to page 432.)

- *1: Water resistant type auto switches are mountable on the above models, but in such case SMC cannot guarantee water resistance.
 - A water resistant type cylinder is recommended for use in an environment which requires water resistance However, please contact SMC for water resistant products of ø12 and ø16.
- *2: The D-P3DWA□ is mountable on bore size ø25 to ø100.
- *3: 1 m type lead wire is only applicable to the D-A93.
- *: Lead wire length symbols: 0.5 mNil (Example) M9NW
 - 1 m..... M (Example) M9NWM (Example) M9NWL 3 m L 5 m..... Z (Example) M9NWZ
- *: Solid state auto switches marked with "O" are produced upon receipt of order.
- *: Other than the auto switches listed above, the D-P4DW type can be mounted. Refer to page 489 for details.
- *: For details about auto switches with pre-wired connector, refer to pages 1192 and 1193.
- *: Auto switches are shipped together, (but not assembled).

Compact Guide Cylinder With Air Cushion MGP Series

Specifications

satisfied. Make a model selection, considering a load according to the graph on pages 456 to 462.

Symbol Air cushion

Made to Order: Individual Specifications (For details, refer to page 491.)

| Symbol | Specifications |
|--------|---|
| -X867 | Side porting type (Plug location changed) |

Made to Order Click here for details

| Symbol | Specifications |
|--------|--|
| -XA□ | Change of guide rod end shape |
| -XC19 | Intermediate stroke (Spacer type) |
| -XC79 | Tapped hole, drilled hole, pinned hole machined additionally |
| -XC85 | Grease for food processing equipment |

Refer to pages 486 to 490 for cylinders with auto switches.

- · Auto switch proper mounting position (detection at stroke end) and its mounting
- · Minimum stroke for auto switch mounting
- Operating range
- · Auto switch mounting brackets/Part no.
- · Auto Switch Mounting

Standard Strokes

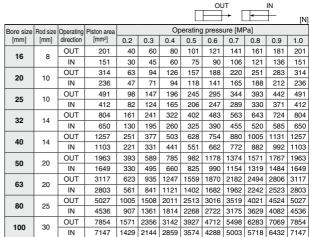

| Bore size [mm] | Standard stroke [mm] |
|----------------|---|
| 16 | 25, 50, 75, 100, 125, 150, 175, 200, 250 |
| 20 to 63 | 25, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400 |
| 80, 100 | 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400 |

Manufacture of Intermediate Strokes

| Description | standard stroke cylinder. Minimum manufacturable stroke Ø16 Ø86 | Minimum manufacturable stroke ø16 to ø63: 15 mm ø80, ø100: 20 mm Select a rubber bumper type, because the cushion effect is not obtainable for less than this stroke. | | | | | | |
|---|---|--|--|--|--|--|--|--|
| Model no. | Add "-XC19" to the end of standard part number. | | | | | | | |
| | ø16 | 15 to 249 | | | | | | |
| Applicable stroke [mm] | ø20 to ø63 | 15 to 399 | | | | | | |
| Stroke [mm] | ø80, ø100 | 20 to 399 | | | | | | |
| Example Part no.: MGPM20-35AZ-XC19 A collar 15 mm in width is installed in the MGPM20-50AZ. C dimension is | | | | | | | | |

^{*:} Intermediate stroke (in 1 mm increments) based on an exclusive body will be available upon request for special.

Theoretical Output

^{*:} Theoretical output [N] = Pressure [MPa] x Piston area [mm2]

High Precision Ball Bushing/MGPA

^Caution

[kg]

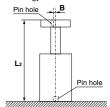

Positioning accuracy for pin hole on the plate

Dispersion of dimensions when machining each component will be accumulated in the plate pin hole positioning accuracy when mounting this cylinder. Values below are referred as a guide.

- $\mathbf{A} = \boxed{\text{Catalog dimension}} \pm (0.1 + \mathbf{L}_1 \times 0.0008) \text{ [mm]}$
- *1: To be 0.15 for ø80. ø100
- Displacement by load and self-weight deflection by plate and guide rod are not included.

[Bottom mounting]

 $\mathbf{B} = \pm (0.045 + \mathbf{L}_2 \times 0.0016) \text{ [mm]}$

Non-rotating Accuracy of Plate

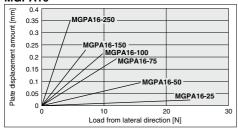

Non-rotating accuracy θ when retracted and when no load is applied should be not more than the values shown in the table.

| Bore size | Non-rotating accuracy θ | | | | | | | | | |
|-----------|--------------------------------|--------|--------|--|--|--|--|--|--|--|
| [mm] | MGPM | MGPL | MGPA | | | | | | | |
| 16 | ±0.07° | ±0.05° | | | | | | | | |
| 20 | ±0.06° | ±0.04° | | | | | | | | |
| 25 | ±0.00 | ±0.04 | | | | | | | | |
| 32 | ±0.05° | ±0.03° | ±0.01° | | | | | | | |
| 40 | ±0.05 | ±0.03 | | | | | | | | |
| 50 | ±0.04° | ±0.03° | | | | | | | | |
| 63 | ±0.04 | ±0.03 | | | | | | | | |
| 80 | ±0.03° | ±0.03° | | | | | | | | |
| 100 | ±0.03 | ±0.03 | | | | | | | | |

With Air Cushion MGP Series **Model Selection**

Selection Conditions

Selection Example 1 (Vertical Mounting)

Selection conditions

Mounting: Vertical

Bearing type: Ball bushing Stroke: 75 stroke

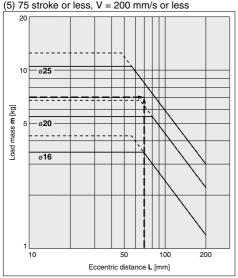

Maximum speed: 200 mm/s

Load mass: 7 kg

Eccentric distance: 70 mm

Find the point of intersection for the load mass of 7 kg and the eccentric distance of 70 mm on graph (5), based on vertical mounting, ball bushing, 75 mm stroke, and the speed of 200 mm/s.

→MGPL25-75AZ is selected.

Selection Example 2 (Horizontal Mounting)

Selection conditions

Mounting: Horizontal

Bearing type: Slide bearing

Distance between plate and load center of gravity: 40 mm

Maximum speed: 400 mm/s

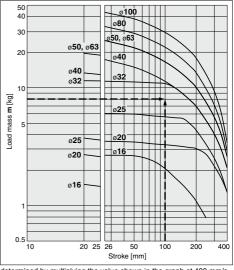

Load mass: 8 kg

Stroke: 100 stroke

Find the point of intersection for the load mass of 8 kg and 100 stroke on graph (17), based on horizontal mounting, slide bearing, the distance of 40 mm between the plate and load center of gravity, and the speed of 400 mm/s.

→MGPM32-100AZ is selected.

(17) L = 50 mm, V = 400 mm/s

· When the maximum speed exceeds 200 mm/s, the allowable load mass is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

) SMC

| Maximum | Up to 300 mm/s | Up to 400 mm/s | Up to 500 mm/s |
|-------------|----------------|----------------|----------------|
| Coefficient | 1.7 | 1 | 0.6 |

Ø32 to Ø63/MGPM, MGPL, MGPA (With Air Cushion)

- *: The use of a slot (width XA, length XB, depth XC) allows for a relaxed pin pitch tolerance, with the pin hole (ØXAH9, depth XL) as the reference, without affecting mounting accuracy.
- *: For intermediate strokes other than standard strokes, refer to Manufacture of Intermediate Strokes on page 453.
- *: Choice of Rc, NPT, G port is available. (Refer to page 452.)

- *1: Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.
- Please consult with SMC regarding water resistant types with the above model numbers.
- *2: 1 m type lead wire is only applicable to the D-A93.
- *: Lead wire length symbols: 0.5 m········Nii (Example) M9NW *: Solid state auto switches marked with "O" are produced upon receipt of order.

 1 m········· M (Example) M9NWM *: Bore sizes 32 to 100 are available for D-P4DW.

*: Bore sizes 25 to 100 are available for D-P3DWA

- 3 m----- L (Example) M9NWL 5 m---- Z (Example) M9NWZ
- *: Since there are other applicable auto switches than listed above, refer to page 489 for details.
- *: For details about auto switches with pre-wired connector, refer to pages 1192 and 1193.
- *: Auto switches are shipped together, (but not assembled).

- *1: 0.1 MPa except the lock unit.
- *2: Maximum speed with no load. Depending on the operating conditions, the piston speed may not be satisfied. Make a model selection, considering a load according to the graph on pages 439 to 445.

Lock Specifications

| Lock position | Head end, Rod end | | | | | | | | | | | | |
|----------------|--------------------------|-----|-----|---|------|------|------|------|--|--|--|--|--|
| Holding force | ø20 | ø25 | ø32 | ø40 | ø50 | ø63 | ø80 | ø100 | | | | | |
| (Max.) N | 215 | 330 | 550 | 860 | 1340 | 2140 | 3450 | 5390 | | | | | |
| Backlash | | | | 550 860 1340 2140 3450 5390 2 mm or less | | | | | | | | | |
| Manual release | Non-lock type, Lock type | | | | | | | | | | | | |

Adjust switch positions for operation at both the stroke end and backlash (2 mm) movement positions.

Standard Strokes

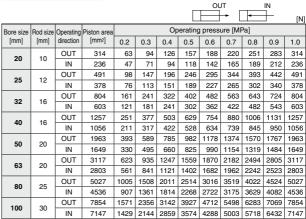

| Bore size [mm] | Standard stroke [mm] |
|------------------------------------|---|
| 20, 25, 32, 40, 50, 63, 80, 100 | 25, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400 |

Manufacture of Intermediate Stroke

| Description | Spacer installation type. Dealing with the stroke in 5 mm increments is available by installing spacer with standard stroke cylinder. When a spacer is mounted on the cylinder with an end lock on the rod side, use a special piston rod. |
|------------------------|---|
| Part no. | Refer to "How to Order" for the standard model numbers on page 469. |
| Applicable stroke [mm] | 5 to 395 |
| Example | Part no.: MGPM50-35-HN A spacer 15 mm in width is installed in a MGPM50-50-HN. C dimension is 119 mm. |

*: The minimum stroke for mounting auto switches is 10 stroke or more for two switches, and 5 stroke or more for one switch. *: Intermediate stroke (in 1 mm increments) based on an exclusive body will be available upon request for special.

Theoretical Output

^{*:} Theoretical output [N] = Pressure [MPa] x Piston area [mm2]

MGP Series With End Lock **Specific Product Precautions**

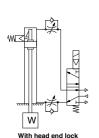

Be sure to read this before handling the products.

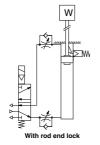

Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Use Recommended Air Pressure Circuit.

∕!\ Caution

· It is necessary for proper locking and unlocking.

Handling

∕ Caution

1. Do not use a 3 position solenoid valve.

Avoid using this cylinder in combination with a 3 position solenoid valve (particularly the closed center metal seal type). If air pressure becomes sealed inside the port on the side that contains the lock mechanism, the lock will not engage. Even if the lock is engaged at first, the air that leaks from the solenoid valve could enter the cylinder and cause the lock to disengage as time elapses

Back pressure is necessary for unlocking.

Before starting, make sure that air is supplied to the side that is not equipped with a lock mechanism as shown in the diagram above. Otherwise, the lock may not disengage. (Refer to "Rock Disengagement".)

3. Disengage the lock before installing or adjusting the cylinder.

The lock could become damaged if the cylinder is installed with its lock engaged.

4. Operate the cylinder at a load ratio of 50% or less. The lock might not disengage or might become damaged if a load ratio of 50% is exceeded.

5. Do not synchronize multiple cylinders.

Do not operate two or more end lock cylinders synchronized to move a single workpiece because one of the cylinder locks may not be able to disengage when required.

6. Operate the speed controller under meterout control.

If operated under meter-in control, the lock might not disengage.

7. On the side that has a lock, make sure to operate at the stroke end of the cylinder.

The lock might not engage or disengage if the piston of the cylinder has not reached the stroke end.

- 8. Do not use the air cylinder as an air-hydro cylinder. This may result in oil leak.
- 9. The position adjustment of the auto switch should be performed at two positions; a position determined by the stroke and a position after the backlash movement (by 2 mm).

When a 2-color indicator auto switch is adjusted to show green at the stroke end, the indication may turn red when the cylinder returns by the backlash. This, however, is not an error.

Operating Pressure

1. Supply air pressure of 0.15 MPa or higher to the port on the side that has the lock mechanism, as it is necessary for disengaging the lock

Exhaust Air Speed

∕ Caution

1. The lock will engage automatically if the air pressure at the port on the side that has the lock mechanism becomes 0.05 MPa or less. Be aware that if the piping on the side that has the lock mechanism is narrow and long, or if the speed controller is located far from the cylinder port, the exhaust air speed could become slower, involving a longer time for the lock to engage. A similar result will ensure if the silencer that is installed on the exhaust port of the solenoid valve becomes clogged.

Lock Disengagement

⚠Warning

1. To disengage the lock, make sure to supply air pressure to the port on the side without a lock mechanism, thus preventing the load from being applied to the lock mechanism. (Refer to the recommended air pressure circuit.) If the lock is disengaged when the port on the side that does not contain a lock mechanism is in the exhausted state and the load is being applied to the lock mechanism, undue force will be applied to the lock mechanism, and it may damage the lock mechanism. Also, it could be extremely dangerous, because the piston rod could move suddenly.

Manual Disengagement

∕∆Caution

1. Non-locking type manual release Insert the bolt, which is provided as an

accessory part, through the rubber cap (it is not necessary to remove the rubber cap). Screw the bolt into the lock piston and pull the bolt to disengage the lock. Releasing the bolt will re-engage the lock.

| THE DUIL SIZE | , pulling force, and the stroke | are listed beit | Jvv. |
|----------------|---------------------------------|-----------------|-------------|
| Bore size [mm] | Thread size | Pulling force | Stroke [mm] |
| 20, 25, 32 | M2.5 x 0.45 x 25 L or more | 4.9 N | 2 |
| 40, 50, 63 | M3 x 0.5 x 30 L or more | 10 N | 3 |
| 80, 100 | M5 x 0.8 x 40 L or more | 24.5 N | 3 |
| | | | |

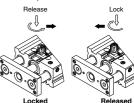

Bolt should be detached under normal operation, otherwise it may cause malfunction of the locking feature.

2. Locking type manual release

Turn 90° counterclockwise while pushing the M/O knob. Lock is released when ▲ on the cap and ▼ OFF mark on the M/O knob correspond. (Lock remains released.)

When locking 90° desired, turn clockwise while fully pushing the M/O knob and correspond A on the cap and ▼ ON mark on the M/O knob. Confirm the correct position by click sound "click". Otherwise, lock may not be engaged.

Specifications

| Bore size [mm] | 50 | 80 | | | | |
|-------------------------------|---------------|----------------|--|--|--|--|
| Action | Double acting | | | | | |
| Fluid | Air | | | | | |
| Proof pressure | 1.5 MPa | | | | | |
| Maximum operating pressure | 1.0 MPa | | | | | |
| Minimum operating pressure | 0.1 I | MPa | | | | |
| Ambient and fluid temperature | −10 to 60°C | (No freezing) | | | | |
| Piston speed *1 | 50 to 40 | 0 mm/s | | | | |
| Cushion | Rubber bumpe | r on both ends | | | | |
| Lubrication | Not required | d (Non-lube) | | | | |
| Stroke length tolerance | +1.5 mm | | | | | |

^{*1:} Maximum speed with no load. Depending on the operating conditions, the piston speed may not be satisfied. Make a model selection, considering a load according to the graph on pages 480 to 482.

Standard Strokes

| Bore size [mm] | Standard stroke [mm] |
|----------------|-------------------------------------|
| 50, 80 | 25, 50, 75, 100, 125, 150, 175, 200 |

Manufacture of Intermediate Stroke

| Description | Spacer installation type Spacers are installed in the standard stroke cylinder. Available in 5 mm stroke increments. |
|------------------------|--|
| Part no. | Refer to "How to Order" for the standard model numbers on page 478. |
| Applicable stroke [mm] | 5 to 195 |
| Example | Part no.: MGPS50-35 A spacer 15 mm in width is installed in a MGPS50-50. C dimension is 94 mm. |

^{*:} Intermediate stroke (in 1 mm increments) based on an exclusive body will be available upon request for special.

MGPS Series **Model Selection**

Selection Conditions

Selection Example 1 (Vertical Mounting)

Selection conditions

Mounting: Vertical

Stroke: 50 stroke

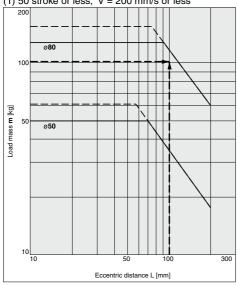

Maximum speed: 200 mm/s

Load mass: 100 kg Eccentric distance: 100 mm

Find the point of intersection for the load mass of 100 kg and the eccentric distance of 100 mm on graph 1, based on vertical mounting, 50 mm stroke, and the speed of 200 mm/s.

→ MGPS80-50 is selected.

(1) 50 stroke or less, V = 200 mm/s or less

Selection Example 2 (Horizontal Mounting)

Selection conditions

Mounting: Horizontal

Distance between plate and load center of gravity: 50 mm

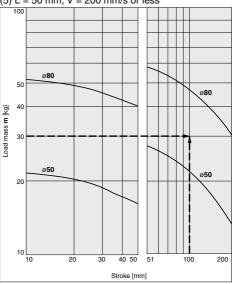

Maximum speed: 200 mm/s

Load mass: 30 kg Stroke: 100 stroke

Find the point of intersection for the load mass of 30 kg and 100 stroke on graph 5, based on horizontal mounting, the distance of 50 mm between the plate and load center of gravity, and the speed of 200 mm/s.

→MGPS80-100 is selected.

(5) L = 50 mm, V = 200 mm/s or less

· When the maximum speed exceeds 200 mm/s, the allowable load mass is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below

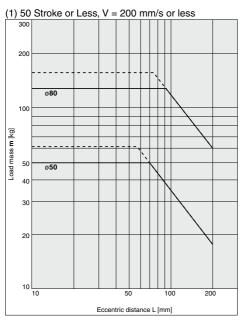

| Maximum | Up to 300 mm/s | Up to 400 mm/s | Up to 500 mm/s |
|-------------|----------------|----------------|----------------|
| Coefficient | 1.7 | 1 | 0.6 |

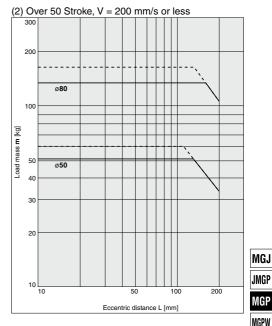

[·] Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

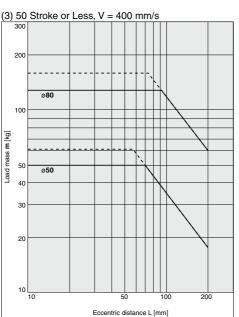

Vertical Mounting Slide Bearing

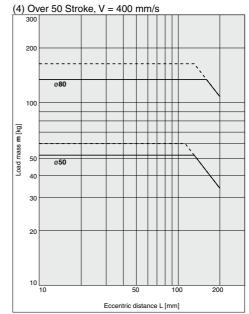

- Operating pressure 0.4 MPa ---- Operating pressure 0.5 MPa or more

MGPS50, 80

[·] Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

MGP Series Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 3

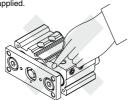

Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Mounting

.⚠Warning

 Never place your hands or fingers between the plate and the body.

Be very careful to prevent your hands or fingers from getting caught in the gap between the cylinder body and the plate when air is applied.

⚠ Caution

492

1. Use cylinders within the piston speed range.

An orifice is set for this cylinder, but the piston speed may exceed the operating range if the speed controller is not used. If the cylinder is used outside the operating speed range, it may cause damage to the cylinder and shorten the service life. Adjust the speed by installing the speed controller and use the cylinder within the limited range.

2. Pay attention to the operating speed when the product is mounted vertically.

When using the product in the vertical direction, if the load factor is large, the operating speed can be faster than the control speed of the speed controller (i.e. quick extension). In such cases, it is recommended to use a dual speed controller.

Do not scratch or gouge the sliding portion of the piston rod and the guide rod.

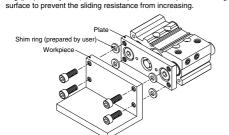

Damaged seals etc. will result in leakage or malfunction.

4. Do not dent or scratch the mounting surface of the body and the plate.

The flatness of the mounting surface may not be maintained, which would cause an increase in sliding resistance.

Make sure that the cylinder mounting surface has a flatness of 0.05 mm or less.

If the flatness of the workpieces and brackets mounted on the plate is not appropriate, sliding resistance may increase. If it is difficult to maintain a flatness of 0.05 or less, put a thin shim ring (prepared by user) between the plate and workpiece mounting

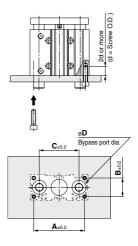

Mounting

∧ Caution

6. Bottom of cylinder

The guide rods protrude from the bottom of the cylinder at the end of the retracting stroke, and therefore, in cases where the cylinder is to be bottom mounted, it is necessary to provide bypass ports in the mounting surface for the guide rods, as well as holes for the hexagon socket head cap screws which are used for mounting.

Moreover, in applications where impact occurs from a stopper etc., the mounting screws should be inserted to a depth of 2d or more.

Refer to back page 50 for Safety Instructions and pages 3 to 12 for Actuator and Auto Switch Precautions.

Piping

Depending on the operating conditions, piping port positions can be changed by using a plug.

1. M5

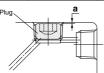

After tightening by hand, tighten additional 1/6 to 1/4 rotation with a tightening tool.

2. Tapered thread for Rc port (MGP) and NPT port (MGP□□TN)

Use the correct tightening torques listed below. Before tightening the plug, wrap pipe tape around it. Also, with regard to the sunk dimension of a plug (dimension "a" in the drawing), use the stipulated figures as a guide and confirm the air leakage before operation.

If tightening plugs on the top mounting port with more than the proper tightening torque, plugs will be screwed much deeply and air passage will be squeezed. Consequently, the cylinder speed will be restricted.

| Connection thread (plug) size | Proper tightening torque [N⋅m] | a dimension |
|-------------------------------|--------------------------------|----------------|
| 1/8 | 7 to 9 | 0.5 mm or less |
| 1/4 | 12 to 14 | 1 mm or less |
| 3/8 | 22 to 24 | 1 mm or less |

3. Parallel pipe thread for G port (MGP□□TF)

Screw in the plug to the surface of the body (dimension "a" in the drawing) by checking visually instead of using the tightening torque shown in the table.

Cushion

With air cushion

⚠ Warning

1. Do not open the cushion valve excessively.

Air leakage will occur if operated after opening by 4 rotations or more. Furthermore, a stopper mechanism is provided for the cushion valve, and it should not be forced open beyond that position. Be aware that the cushion valve may jump up from the cover when the air is supplied.

⚠ Caution

 Be sure to use the cylinder after the air cushion has been adjusted appropriately.

First, fully close the cushion valve. Start the operation at the cylinder speed to be used with the load applied, and then open the cushion valve gradually to make the adjustment. The optimal adjustment is that the piston reaches its stroke end and the collision sound is minimized. If the cushion valve is used without adjusting the air cushion appropriately, this may cause damage to the retaining ring or piston.

| Bore size [mm] | Applicable tool |
|--------------------|----------------------------------|
| 16, 20, 25, 32, 40 | JIS B4648 hexagon wrench key 1.5 |
| 50, 63, 80, 100 | JIS B4648 hexagon wrench key 3 |

2. Be sure to operate a cylinder equipped with air cushion to the end of the stroke.

If it is not operated to the end of the stroke, the effect of the air cushion will not be fully exhibited. Consequently, in cases where the stroke is regulated by an external stopper etc., caution must be exercised, as the air cushion may become completely ineffective.

3. Do not open the cushion needle after rotating it numerous times in a row.

Though uncommon, there are cases in which the cushion needle may leak air.

The cushion needle should be adjusted by gradually opening it while checking the operation of the cylinder cushion.
