Large Size 3 Port Solenoid Valve
VP3145/3165/3185 Series
Rubber Seal

CE

[Option]
Note) CE-compliant: D/DL/DS/DZ only (Electrical entry)

Large flow capacity, small exhaust resistance
(Refer to "Flow Rate Characteristic" table.)

Easy conversion to N.C. or N.O.
Function plate makes it possible to use as a N.C. or N.O. valve with the port unchanged.

Possible to use in vacuum or under low pressures
Vacuum: Up to 101.2 kPa
Low pressure: 0 to 0.2 MPa

Free mounting orientation

Made to Order
(Refer to pages 1313 to 1315 for details.)

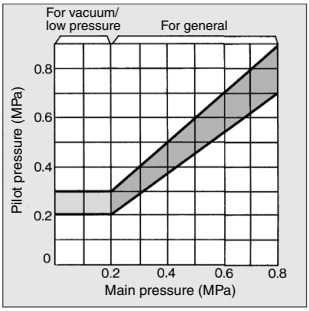
External Pilot

Use external pilot model in the following cases.

- Vacuum or low pressure (0.2 MPa or less): Vacuum/Low pressure type
- Using the valve with supply port external throttle: General type
- Air pressure of supply port is slow: General type
- Resistance in outlet side is small in case of air blowing or filling an air tank: General type

Note 1) Keep external pilot pressure within the pressure range below.

Note 2) Conversion of internal pilot and external pilot can not be done.



Specifications

Fluid		Air					
Type of actuation		N.C. or N.O. (Convertible)					
Pilot type		Internal pilot	External pilot				
		For general	For vacuum/low pressure			For general	
Operating pressure range (MPa)	**Main pressure**	0.2 to 0.8	−101.2 kPa to 0.2			0.2 to 0.8	
	Pilot pressure		0.2 to 0.3			Refer to the graph left.	
Ambient and fluid temperature (°C)		0 (No freezing) to 60					
Response time (ms) (1) **(at the pressure of 0.5 MPa)**		ON	AC	30 or less	OFF	AC	30 or less
			DC	40 or less		DC	30 or less
Max. operating frequency (Hz)		3					
Lubrication (2)		Required (Equivalent to turbine oil Class1 ISO VG32)					
Manual override		Yes (Non-locking)					
Mounting orientation		Unrestricted					
Impact/Vibration resistance (m/s²) (3)		150/50					

Note 1) Based on dynamic performance test, JIS B 8419: 2010. (Coil temperature: 20°C, at rated voltage, without surge voltage suppressor)

Note 2) This solenoid valve requires lubrication. Use turbine oil Class 1 (ISO VG32).

Note 3) Impact resistance: No malfunction occurred when it is tested with a drop tester in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 1000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)

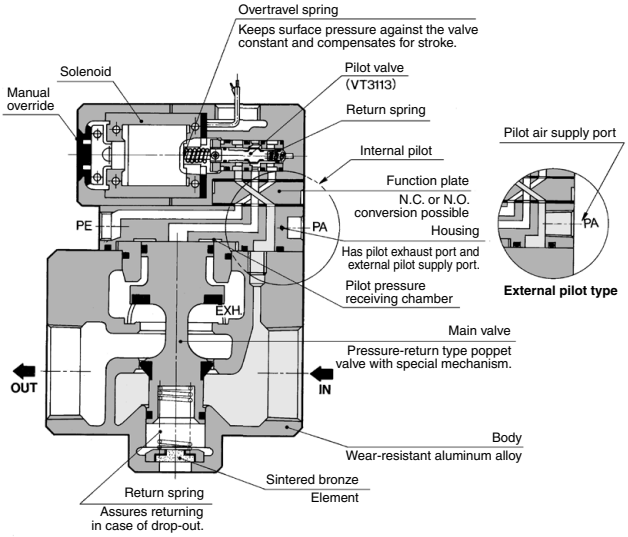
Conduit terminal··· +0.2 kg

Construction/Internal Pilot

As in the figure below, this pilot-operated solenoid valve consists of a compact 3 port solenoid valve as the pilot valve and a large 3 port valve as the main valve.
The pilot valve controls opening and closing the main valve. N.C. or N.O. function conversion can be done by switching the pilot passage.



Note) Pilot valve and body are shown in a different direction from the actual product in order to show the construction and air passage.

Piping (Vacuum Use)

1. Piping in general:

EXH port = Vacuum pump/ Blower } (Suction side)
OUT port = Tank/ Vacuum pad } (Load side)
IN port = Plug (2 port valve) / Air releasing / Air pressure-in

2. Following the above piping, vacuum passage is switched between OUT and EXH, therefore, N.C./N.O. indication on the function plate and switching of the vacuum passage are reversed; N.C. (Normally closed) in vacuum passage are reversed:

"N.C." indicated on the plate
→ N.O. in vacuum passage (Normally open)
"N.O." indicated on the plate
→ N.C. in vacuum passage (Normally closed)

N.C./N.O. Conversion

To convert valve operation from N.C. to N.O. or N.O. to N.C., remove the pilot valve, move the function plate along the gasket, both top and bottom until the mark ▶ meets N.C. (N.O.)
Please note however, that the N.O. valve functions properly only when the appropriate pressure is applied to the valve.

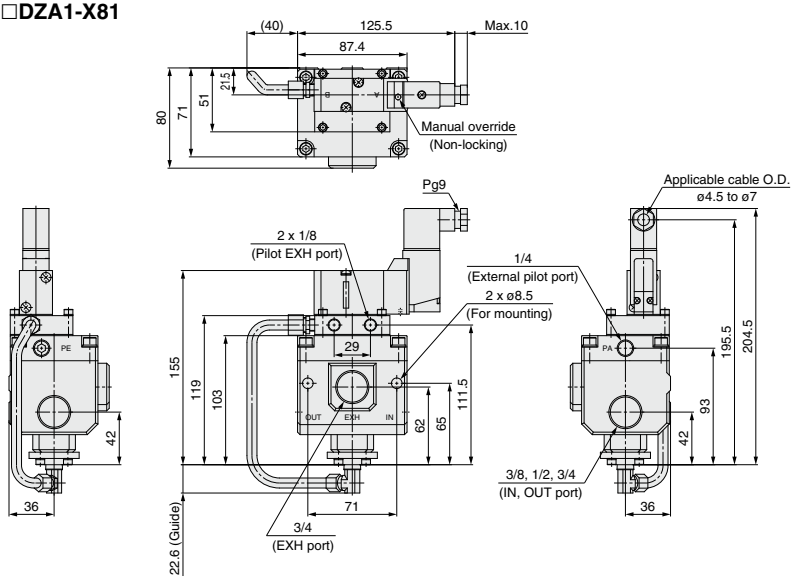
* A rectifying circuit is used in the AC type.
Note) At rated voltage

⚠ Caution

Piping and other usage are the same as standard products.

Dimensions

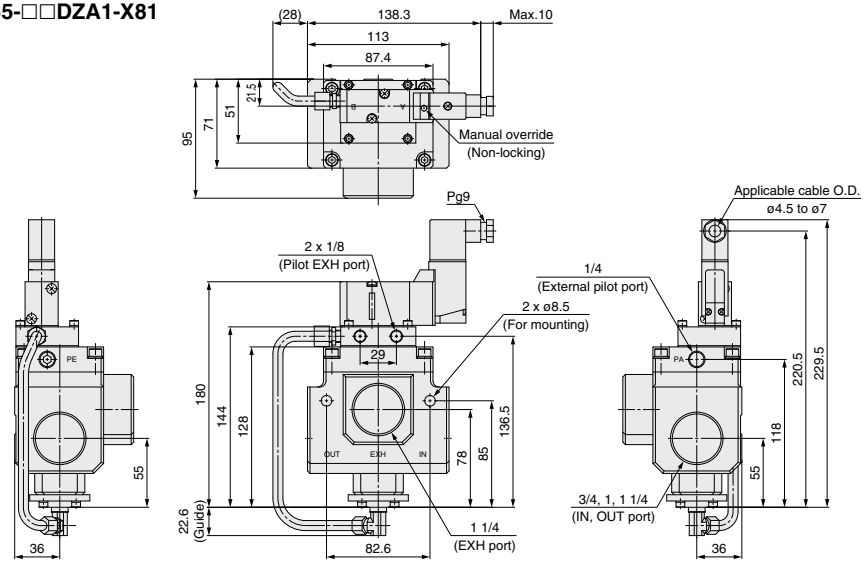
VP3145-□□DZA1-X81



- In the case of B spec. of -X81 (N.O. spec.), VF3140K solenoid has to be positioned at left, when looking at the EXH port in the front face.
- In the case of -X80, VF3240K-□□□1 (Pilot valve) will be mounted.

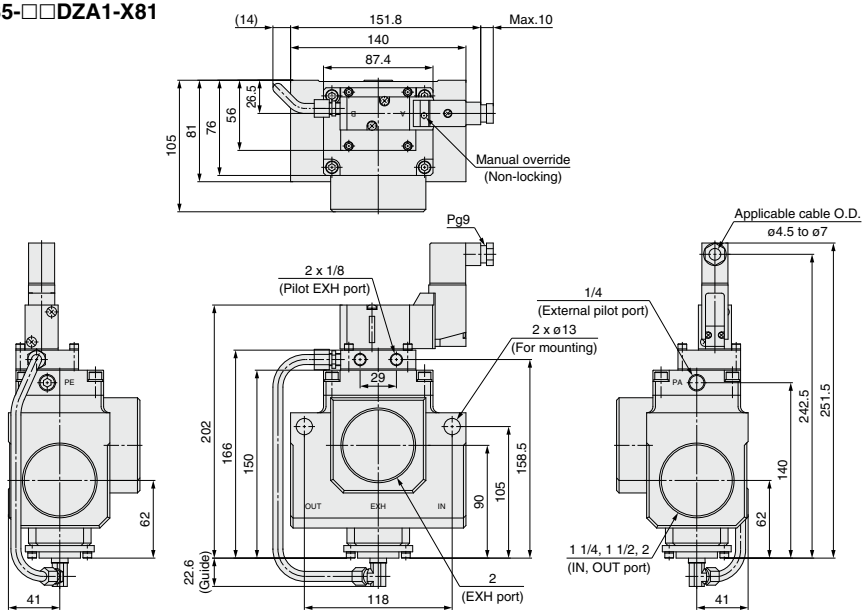
Dimensions

VP3165-□□DZA1-X81



• In the case of B spec. of -X81 (N.O. spec.), VF3140K solenoid has to be positioned at left, when looking at the EXH port in the front face.
• In the case of -X80, VF3240K-□□□1 (Pilot valve) will be mounted.

VP3185-□□DZA1-X81



• In the case of B spec. of -X81 (N.O. spec.), VF3140K solenoid has to be positioned at left, when looking at the EXH port in the front face.
• In the case of -X80, VF3240K-□□□1 (Pilot valve) will be mounted.

VP3145/3165/3185 Series
Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

⚠ Caution

Piping
If supply port air pressure drops to less than 0.2 MPa, the valve may malfunction. In such a case, use external pilot type.
(When throttling IN port, or operating with OUT port open to the atmosphere or in a similar operation.)

Pressure balance among each port
This solenoid valve is pressure-unbalanced type. Operate it within this pressure range: IN ≥ OUT ≥ EXH. If not operated in the range, the valve will malfunction.

Use as 2 port valve
1. Plug EXH port in case of pressure-in and plug IN port in case of vacuum use.
2. This valve has slight air leakage and can not be used for such purposes as holding air pressure (including vacuum) in the pressure container.

Supply air
Install an air filter and a lubricator on the upstream side.

Lubrication
This solenoid valve requires lubrication. Use turbine oil Class 1 (ISO VG32).

Environment
If using the valve in a dusty environment, install a silencer at EXH port and PE port to prevent dust from entering.

N.C./N.O. conversion
When converting from N.C. to N.O. and vice versa, note that the equipment to be connected will act reversely.

How to Calculate the Flow Rate
For obtaining the flow rate, refer to front matter.

Light/Surge Voltage Suppressor

	Grommet (G)	Conduit terminal (T)	DIN terminal (D)
With indicator light (L)	None	Neon bulb, Coil	48 VDC or less: LED, Coil 100 VAC or more: Neon bulb, Coil
Surge voltage suppressor (S)	Varistor, Coil		
With light/surge voltage suppressor (Z)	None	Neon bulb, Varistor, Coil	48 VDC or less: LED, Varistor, Coil 100 VAC or more: Neon bulb, Varistor, Coil

"Items that are marked "With indicator light," "With surge voltage suppressors," and "With light/surge voltage suppressor" are all non-polar types.

How to Use DIN Terminal

1. Disassembly
1) After loosening the screw ①, then if the housing ④ is pulled in the direction of the screw ①, the connector will be removed from the body of equipment (solenoid, etc.).
2) Pull out the screw ①, then remove the gasket ②.
3) On the bottom part of the terminal block ③, there's a cut-off part (indication of an arrow) ③a. If a small flat head screwdriver is inserted between the opening in the bottom, terminal block ③ will be removed from the housing ④.
(Refer to graph at right.)
4) Remove the cable gland ⑤ and plain washer ⑥ and rubber seal ⑦.

2. Wiring
1) Pass the cable ⑧ through the cable gland ⑤, washer ⑥, rubber seal ⑦, in this order and then insert them into the housing ④.
2) Dimensions of the cable ⑧ are as shown in the right figure. Skin the cable and crimp the crimped terminal ⑨ to the edges.
3) Remove the screw ③f from the bracket ③e. (Loosen in the case of Y-shape type terminal.) As shown in the right figure, mount a crimped terminal ⑨, and then again tighten the screw ③f.

Note) Tighten within the tightening torque of 0.5 N·m ±15%.

Note: a) It is possible to wire even in the state of bare wire. In that case, loosen the screw ③f and place a lead wire into the bracket ③d, and then tighten it once again.
b) The maximum size for the round terminal ⑨ is 1.25 mm²—3.5 and for the Y terminal is 1.25 mm²—4.
c) Cable ⑧ outside diameter: ø6 to ø12 mm

Note) For the one with outside diameter ranged between ø9 to ø12 remove the inside parts of the rubber seal ⑦ before using.

3. Assembly
1) Terminal block ③ connected with housing ④ should be reinstated. (Push it down until you hear the click sound.)
2) Putting rubber seal ⑦, plain washer ⑥, in this order into the cable introducing slit on the housing ④, then further tighten the cable gland ⑤ securely.
3) By inserting gasket ② between the bottom part of the terminal block ③ and a plug on an equipment, screw in ① on top of the housing ④ and tighten it.

Note) Tighten within the tightening torque of 0.5 N·m ±20%.

Changing the entry direction
The cable entry direction of a connector can be changed as desired (4 directions at 90° intervals), depending on the combination of a housing ④ and a terminal block ③.
